ABSTRACT

It is being believed that dead cells could not be made alive by any experiment. But Nature has set a system where dead material eaten during meals get transformed into living material of life and thus we grow. DNA is a self replicating molecule of life. It triggers thoughts from CCP i.e. activation of life thoughts and suppression of death thoughts from higher center(B.B.B) present in DNA. These thoughts are triggered by unconditioned or conditioned thought expressions from thought script CCP. It is TM(time mindness or biological clock) that triggers and regulates these thought expressions step by step. These thoughts are transcribed as informations Code PcPs activation of life and CodePcPs suppression of death separately. These are carried by mRNA from nucleus to cytoplasm by second transcription(photon carries informations) where they(Code PcPs. activation of life information and Code PcPs suppression of death information) are shifted to peptide chain or protease enzyme during translation phenomenon. Having come in contact with protease enzyme , dead A.As of dead proteins transform into Alive A.As during digestion in intestine. That is how life is triggered from dead protein of animals eaten through meals. These thoughts (DNA script) are fed thoughts and feeding was done in pre creation era in the B.B.Bs of DNA (protease enzyme script) by Highest center of the Universe. There is feedback to higher center(B.B.B) before next thought is triggered. There are many thoughts that trigger the phenomenon. But to understand the concept only two thoughts are depicted in diagram. Life effects are nothing but higher thought expression of B.B.Bs. Formation of atoms and particles are due to lower thought expressions. During the origin of life , it was unconditioned thought expressions that lead to formation of first life i.e. green blue algae on earth. It was due to fed thoughts and feeding was done in pre creation era by Highest center of the universe. Highest center has only power to trigger same phenomenon by unconditioned working of nature as It did 3.5 billions years back when first life appeared on earth by formation of blue green algae. If this prediction gets true , the entire hypothesis would be confirmed and dead cells could be made alive.

INTRODUCTION

Protein synthesis is the process whereby biological cells generate new proteins; it is balanced by the loss of cellular proteins via degradation or export. Translation, the assembly of amino acids by ribosomes, is an essential part of the biosynthetic pathway, along with generation of messenger RNA(mRNA), aminoacylation of transfer RNA(tRNA), co-translational transport, and post-translational modification. Protein biosynthesis is strictly regulated at multiple steps.⁽¹⁾ They are principally during transcription(phenomena of RNA synthesis from DNA template) and translation(phenomena of amino acid assembly from RNA). RNA is transcribed in the nucleus; once completely processed, it is transported to the cytoplasm and translated by the ribosome(shown in very pale grey behind the tRNA). The cistron DNA is transcribed into the first of a series of RNA intermediates. The last version is used as a template in synthesis of a polypeptide chain. Protein will often be synthesized directly from genes by translating mRNA. However, when a protein must be available on short notice or in large quantities, a protein precursor is produced.

A proprotein is an inactive protein containing one or more inhibitory peptides that can be activated when the inhibitory sequence is removed by proteolysis during posttranslational modification. A preprotein is a form that contains a signal sequence (an N-terminal signal peptide) that specifies its insertion into or through membranes, i.e., targets them for secretion.⁽²⁾ The signal peptide is cleaved off in the endoplasmic reticulum.⁽²⁾ Preproteins have both sequences (inhibitory and signal) still present. In protein synthesis, a succession of tRNA molecules charged with appropriate amino acids are brought together with an mRNA molecule and matched up by base-pairing through the anti-codons of the tRNA with successive codons of the mRNA. The amino acids are then linked together to extend the growing protein chain, and the tRNAs, no longer carrying amino acids, are released. This whole complex of processes is carried out by the ribosome, formed of two main chains of RNA, called ribosomal RNA (rRNA), and more than 50 different proteins. The ribosome latches onto the end of an mRNA molecule and moves along it, capturing loaded tRNA molecules and joining together their amino acids to form a new protein chain.⁽³⁾

Protein biosynthesis, although very similar, is different for prokaryotes and eukaryotes.

Transcription(edit)

Main article: Transcription(genetics)

Diagram showing the process of transcription

In transcription an mRNA chain is generated, with one strand of the DNA double helix in the genome as a template. This strand is called the template strand. Transcription can be divided into 3 stages: initiation, elongation, and termination, each regulated by a large number of proteins such as transcription factors and coactivators that ensure that the correct gene is transcribed.

Transcription occurs in the cell nucleus, where the DNA is held and is never able to leave. The DNA structure of the cell is made up of two helices made up of sugar and phosphate held together by hydrogen bonds between the bases of opposite strands. The sugar and the phosphate in each strand are joined together by stronger phosphodiester covalent bonds. The DNA is "unzipped"(disruption of hydrogen bonds between different single strands) by the enzyme helicase, leaving the single nucleotide chain open to be copied. RNA polymerase reads the DNA strand from the 3-prime(3') end to the 5-prime(5') end, while it synthesizes a single strand of messenger RNA in the 5'-to-3' direction. The general RNA structure is very similar to the DNA structure, but in RNA the nucleotide uracil takes the place that thymine occupies in DNA. The single strand of mRNA leaves the nucleus through nuclear pores, and migrates into the cytoplasm. The first product of transcription differs in prokaryotic cells from that of eukaryotic cells, as in prokaryotic cells the product is mRNA, which needs no post-transcriptional modification, whereas, in eukaryotic cells, the first product is called primary transcript, that needs post-transcriptional modification(capping with 7-methyl-guanosine, tailing with a poly A tail) to give hnRNA(heterogeneous nuclear RNA). hnRNA then undergoes splicing of introns(noncoding parts of the gene) via spliceosomes to produce the final mRNA.

Translation(edit)

Main article: Translation(biology)

Diagram showing the process of translation

Phenomena of amino acid assembly from RNA. The synthesis of proteins from RNA is known as translation. In eukaryotes, translation occurs in the cytoplasm, where the ribosomes are located. Ribosomes are made of a small and large subunit that surround the mRNA. In translation, messenger RNA(mRNA) is decoded to produce a specific polypeptide according to the rules specified by the trinucleotide genetic code. This uses an mRNA sequence as a template to guide the synthesis of a chain of amino acids that form a protein. Translation proceeds in four phases: activation, initiation, elongation, and termination(all describing the growth of the amino acid chain, or polypeptide that is the product of translation).

In activation, the correct amino acid(AA) is joined to the correct transfer RNA(tRNA). While this is not, in the technical sense, a step in translation, it is required for translation to proceed. The AA is joined by its carboxyl group to the 3' OH of the tRNA by an ester bond. When the tRNA has an amino acid linked to it, it is termed "charged". Initiation involves the small subunit of the ribosome binding to 5' end of mRNA with the help of initiation factors(IF), other proteins that assist the process. Elongation occurs when the next aminoacyl-tRNA(charged tRNA) in line binds to the ribosome along with GTP and an elongation factor. Termination of the polypeptide happens when the A site of the ribosome faces a stop codon(UAA, UAG, or UGA). When this happens, no tRNA can recognize it, but releasing factor can recognize nonsense codons and causes the release of the polypeptide chain. The capacity of disabling or inhibiting translation in protein biosynthesis is used by some antibiotics such as anisomycin, cycloheximide, chloramphenicol, tetracycline, streptomycin, erythromycin, puromycin, etc.

Events during or following protein translation(edit)

Main articles: Proteolysis, Posttranslational modification, and Protein folding

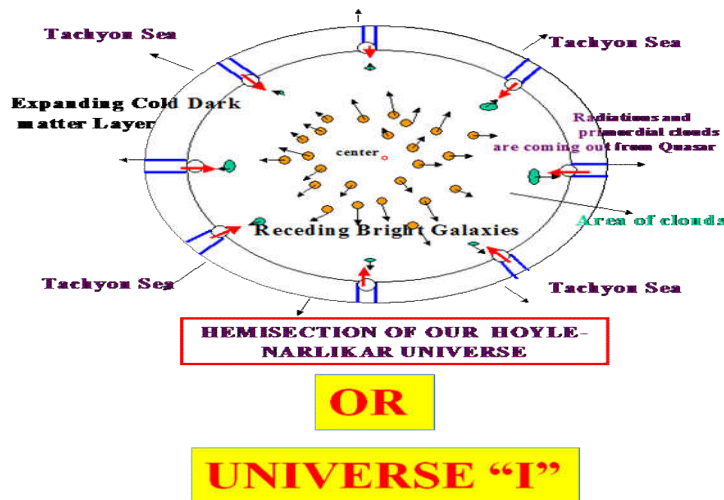

Diagram showing the translation of mRNA and the synthesis of proteins by a ribosome

Events that occur during or following biosynthesis include proteolysis, post-translational modification and protein folding. Proteolysis may remove N-terminal, C-terminal or internal amino-acid residues or peptides from the polypeptide. The termini and side-chains of the polypeptide may be subjected to post-translational modification. These modifications may be required for correct cellular localisation or the natural function of the protein. During and after synthesis, polypeptide chains often fold to assume, so called, native secondary and tertiary structures. This is known as *protein folding* and is typically required for the natural function of the protein.

Hoyle Narlikar Universe - OR -- Universe "I"

What is New Physics or Physics of Mind ?

Hoyle - Narlikar Universe

EXPERIENCE OF THE UNIVERSE

FROM THE POINT OF VIEW OF THE UNIVERSE...
 DEVELOPMENT OF THE UNIVERSE

Special Theory of Relativity (1905) is not Physics of very fast. It has distorted concept of Basic Quantities of MLT. Hence it is illusive Theory

Very Fast Means - Tachyons Particles
FTL Phenomenon

All three Work by
Divine mechanics

Divine Mechanics Connects All three

Very Massive Means - Hoyle Narlikar Universe
And Divine MOND (Gravity Theory)

Very Small Means - Basic Building Blocks
God Particles

Quantum Mechanics (1925) is not Physics of very Small. Superposition and Dual nature of light and matter are illusive theory

Theory of General Relativity (1916) and Big bang are not Physics of very massive. It is illusive Theory of Gravity and universe origin

PHYSICS OF VERY FAST, VERY MASSIVE AND VERY SMALL
Is participatory Science Or Mind Incorporation in Physics

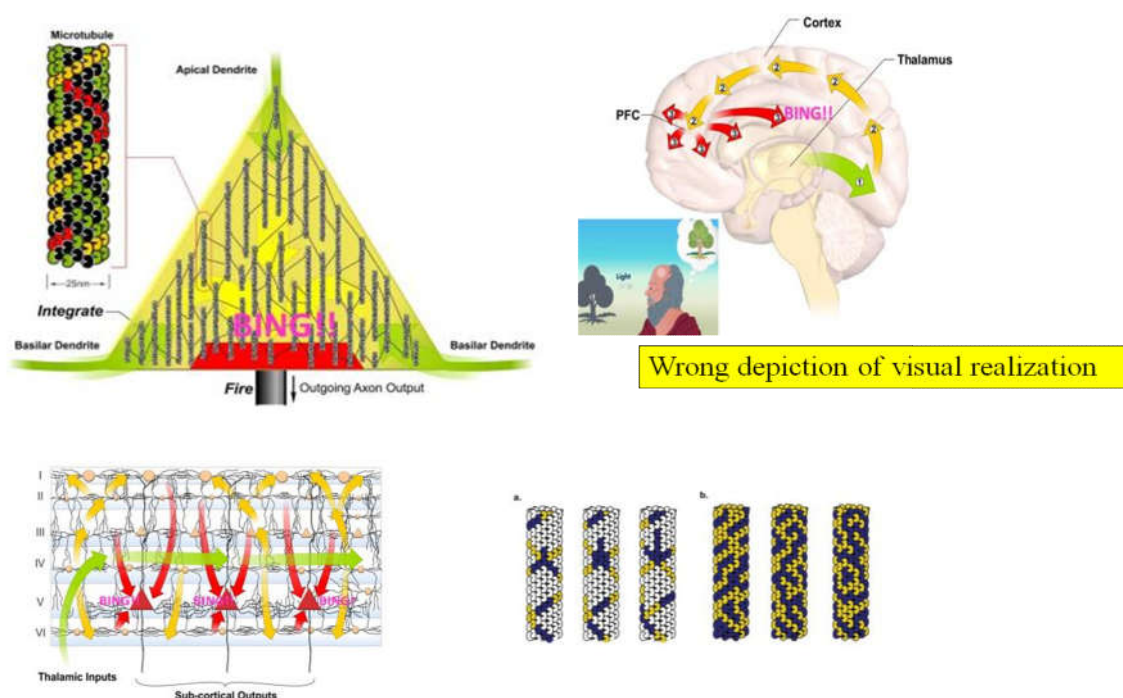

UNIVERSE

Quantum Consciousness – According to Physicists and Biologist

The nature of consciousness remains deeply mysterious and profoundly important, with existential, medical and spiritual implication. We know what it is like to *be* conscious – to have awareness, a conscious ‘mind’, but who, or what, are ‘we’ who know such things? How is the subjective nature of phenomenal experience – our ‘inner life’ - to be explained in scientific terms? What consciousness actually *is*, and how it comes about remain unknown. The general assumption in modern science and philosophy - the ‘standard model’ - is that consciousness emerges from complex computation among brain neurons, computation whose currency is seen as neuronal firings(‘spikes’) and synaptic transmissions, equated with binary ‘bits’ in digital computing. Consciousness is presumed to ‘emerge’ from complex neuronal computation, and to have arisen during biological evolution as an adaptation of living systems, extrinsic to the makeup of the universe. On the other hand, spiritual and contemplative traditions, and some scientists and philosophers consider consciousness to be intrinsic, ‘woven into the fabric of the universe’. In these views, conscious precursors and Platonic forms preceded biology, existing all along in the fine scale structure of reality.

My research involves a theory of consciousness which can bridge these two approaches, a theory developed over the past 20 years with eminent British physicist Sir Roger Penrose. Called ‘orchestrated objective reduction’(‘Orch OR’), it suggests consciousness arises from quantum vibrations in protein polymers called microtubules inside the brain’s neurons, vibrations which interfere, ‘collapse’ and resonate across scale, control neuronal firings, generate consciousness, and connect ultimately to ‘deeper order’ ripples in spacetime geometry. Consciousness is more like music than computation. Colleagues Travis Craddock and Jack Tuszynski and I also study how anesthetics act in microtubules to erase consciousness, and with Jay Sanguinetti, John JB Allen and Sterling Cooley, we are studying how transcranial ultrasound(TUS) can be used noninvasively to resonate brain microtubules and treat mental, cognitive and neurological disorders. Many thanks to my assistant Abi Behar-Montefiore and Ed Xia for maintaining this website.

Mind and Mass Realities (2)

Atomic genetics is the branch of science where we investigate about fundamental interactions of the universe i.e. atomic transcription and translations. New words have been coined to understand hidden science of mind part of reality.

Fig. 1. Divine Mechanics Unit – CCP, CP and information s – Code PcPs with B-Bit – Mass

Mind reality has been recognized as different faces by “I” about 5000 years back to Arjuna in Mahabharata.as shown in Fig 1. It is just like to understand any language through Alphabets. These are (different faces) Alphabets of mind reality. One Mind reality has one face identity and the second mind reality has second face identity and so on. The facial expression represents phenomenon of intelligence and different faces represent different types of properties carrying property. The open eyes means property is activated while close eye means property is inactivated. In spite of carrying properties conscious ness they also know how to conduct not only origin of universe but also how to create two different universe i.e. next creation could be different from this creation. In all, it is automatic system of the universe. The mind realities which are of good properties have devtas face identity (first five faces on both side) and those mind realities which are of bad properties have demons face identity (last four faces on both side). These are named as code PCPs or messenger atomic genes. The central face is CCP or Thought script where all thoughts of the universe are banked. It is bank of data of all information s of the universe It is face identity of Anti mind particles as data of all information’s of the universe are stored as anti mind particles. It is the Time mind ness (biological clock) that keeps on expressing different thoughts from this thought script(CCP). There are four more faces (black bodies) shown on extreme left and right floating in fire are CPs (translating Atomic genes). That translates the messages and realizes it and reacts accordingly.(2)

Messages From Biological world to understand B.B.B world as shown in Fig 2 (2)

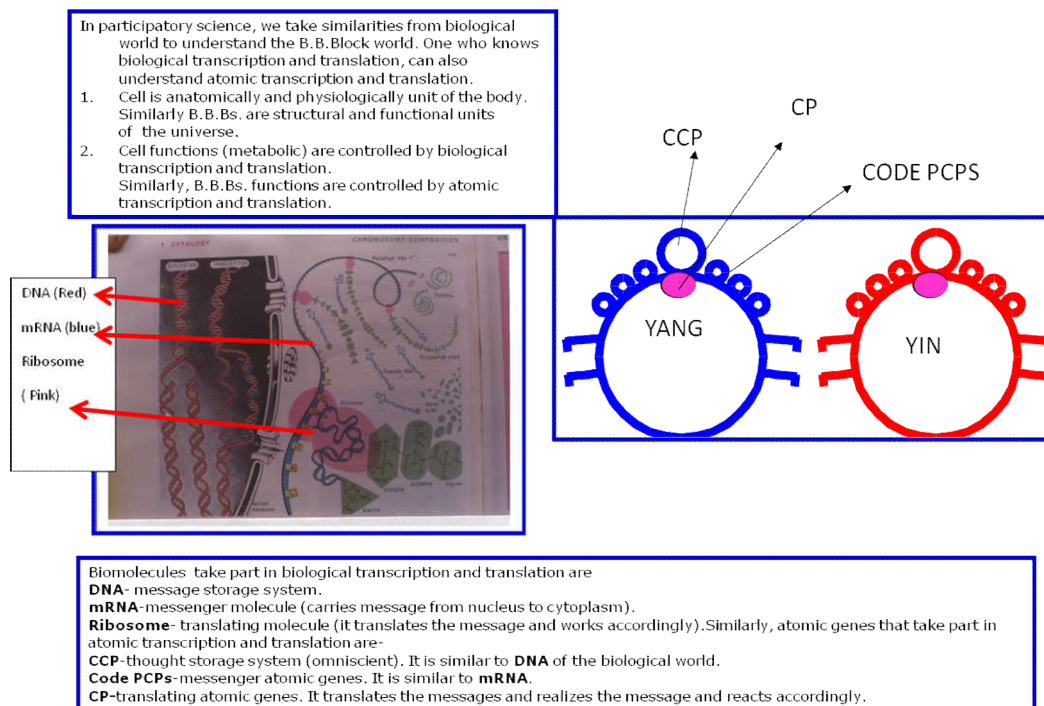

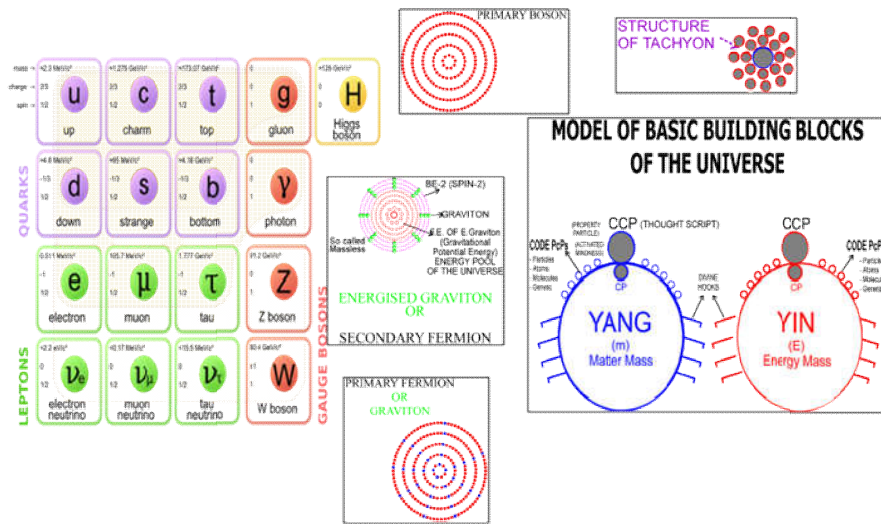

Fig. 2. Parallel teaching by participatory science

Standard model completed with Fundamental particles and Mind And Tachyons

Fig. 3 Standard Model chart (3)

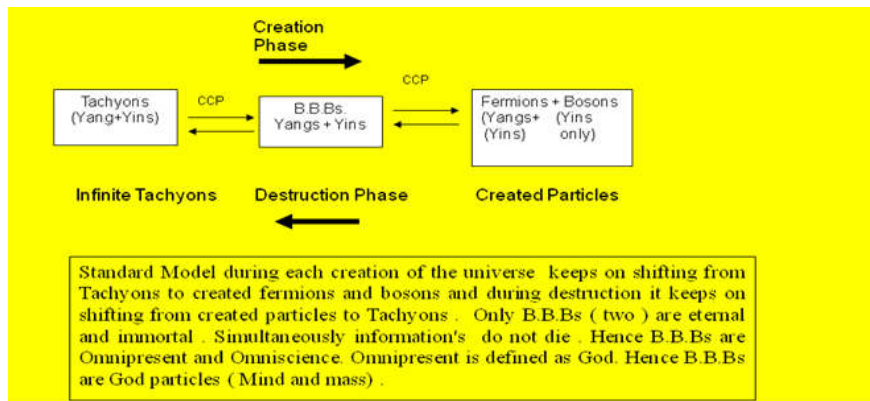

Fig 3.1. One creation and destruction cycle (4)

The standard model not only modified rather it has been completed (3) with introduction of energized gravitons , primary fermions, primary bosons , Basic Building Blocks , Mind and Tachyons as shown in Fig 3. Participatory science has coined (5) some new words and there are some words which already exist in physics. Both these words are defined here and the definitions are according to participatory science. It has no relation with the definitions given in modern physics.

1. **Mass** -The part which gives shape to the smallest mass unit i.e. basics building blocks(B. B. Bs.) is called mass.
2. **Matter** :-Mixture of fermions and bosons or only bosons which are made up of mass(B.B.Bs) and that is why we realize their shape is called matter.
3. **Inertial mass** :-Mass(smallest mass units i.e. B. B. Bs) having inertial properties(classical inertia) either absolute rest or uniform motion in straight line is called inertial mass. Or Number of B. B. Bs. Per unit space present in bigger units is called inertial mass. Or Total matter contained by the bigger units or total number of fermions and bosons contained by the bigger units is called inertial mass. Therefore it never changes from place to place.
4. **Gravitational mass** :- The mass(interacting surfaces) which takes part in gravity(divine energized gravitons theory) interaction (which is due to mind) is called gravitational mass. When gravity interaction increases(number of divine energized gravitons increases) the interacting mass(interacting surface) also increases or when interacting mass(interacting surfaces) increases, gravity interaction(number of divine energized gravitons) also increases. Therefore gravitational mass(interacting mass or surfaces) changes from place to place. It is the fed mind that decides gravity interaction. We shall discuss it in gravity chapter and in atomic genetics.
5. **Pure m(matter) mass** :-matter mass(smallest mass unit or B.B.B) which have got inertial property of absolute rest.
6. **Energy mass**:-Energy mass(smallest energy mass unit B.B.B) which have got inertial property of uniform motion in straight line and which also gives shape to the bigger energy mass (Higgs Bosons etc) units.

7.m (impure matter) of $E=mc^2$:-Matter particles(fermions) which have got spin property are called impure matter particles.

Prayer message formation in brain

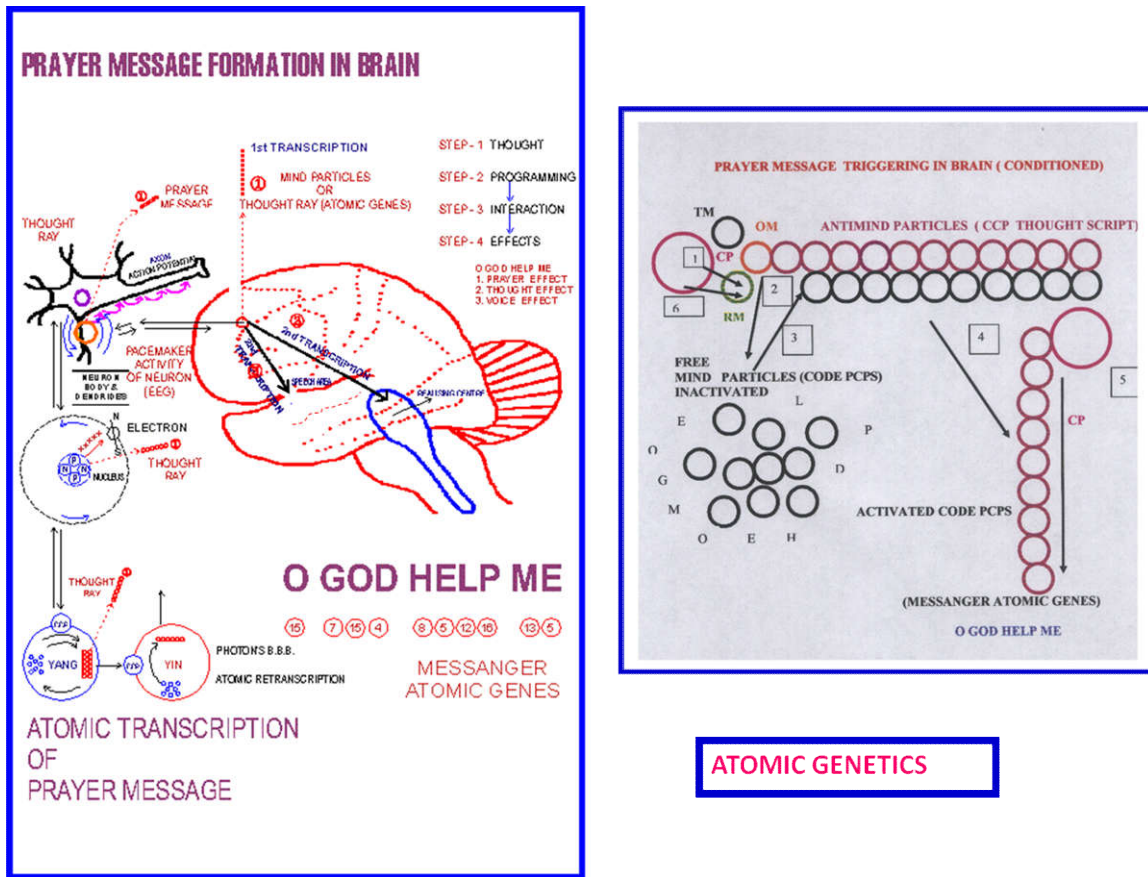

Fig. 4. Divine Mechanics - Prayer message formation in brain

In atomic transcription and translation of prayer (5), following steps take place on Yang B.B.B – B-Bit as shown in Figure 4.

1. CP removes RM(repressor mindness-green) from OM(operating mindness -orange) thus induction of atomic transcription triggers.
2. OM triggers activation of free mind particles (black -inactivated code PCPs) of that thought script(magenta) of “o god help me”.
3. Free mind particles (black -inactivated code PCPs) get attached to anti mind particles script (magenta one) to form messenger thought script of “o god help me”.
4. Messenger atomic genes (black) get activated by anti mind particles thought script and further they get detached from anti mind particles thought script to form activated messenger atomic genes (activated code PCPs) (magenta) of “ o god help me”
5. CP carries phenomenon of splicing by translating the messenger activated atomic genes (activated code PcPs) and finally there is activated message of “ o god help me” is formed.
6. CP represses atomic transcription by adding RM (green) to OM (orange). Thus atomic transcription gets halt.

Having formed the message it comes out in three forms.

In atomic genetic engineering (prayer) we use our basic power i.e. power of B.B.Bs. Our B.B.B.(higher center) talks with highest center of the universe by sending the message by first transcription. Till today nobody knows how does the brain generate thoughts. I am going to tell you that mystery too. In the frontal lobe the neurons are responsible for thought generation. In the neuron there is electrical activity called pacemaker activity which is occurring between dendrites and the body of the neuron. The membrane of the cell is made up of atoms and atom is made up of B.B.Bs. At the level of B.B.B. say thought of 'O GOD HELP ME' is expressed. As a result programmed messages of O GOD HELP ME(code PCPs) are formed. Out of three programmed messages, one is carried by atomic genes to highest center of the universe. It is called THOUGHT RAY (Quantum entanglement) which is made up of pure atomic genes and then the message goes through phenomenon called first transcription. They come out from brain directly. The other two messages are carried by photons from nucleus of atom to electrons. Here they are modulated on electrical activity of the cell called pacemaker activity. Further they are modulated on actions potentials going towards REALIZING CENTER situated in brain stem(RAS) and from RAS to speech area situated in the frontal area. Target B.B.Bs. of the realizing center finally realizes thought effect of O GOD HELP ME. While from speech area message goes to motor cortex

again via RAS and from there to vocal cords and finally it comes out as a speech effect of O GOD HELP ME. In layman's terminology formation of the thought ray means PRAYER as shown in Fig 4

Where Does Prayer Message go ?

Prayer message goes as shown in Figure 5 to highest center of the universe via first transcription where it is realized and it is accepted, the highest center sends two messages to B.B.Bs working as higher center in cancer cell. These messages are message of inhibition of abnormal thought expression and message of activation of normal thought expression. Having received the messages, higher center stops expressing the abnormal thoughts and it starts expressing the normal thoughts. As a result, there are no more abnormal programmed messages and in place of that normal programmed messages are there. Now the messages have shifted from abnormal(5 and 6) to normal(2 and 3). This shifting of thought expression is called **ATOMIC GENETIC ENGINEERING** as shown in **Figure 4.1**

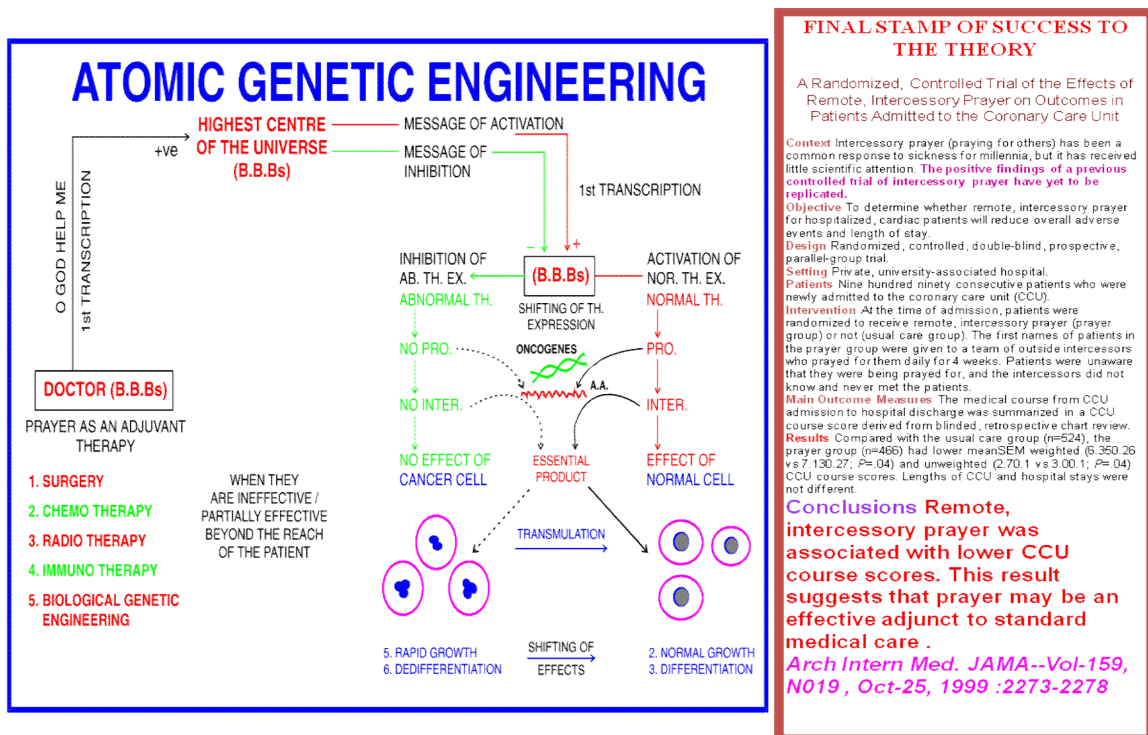

Fig 4.1 A.G.E and Final stamp of success to New Theory (6)

The changed messages reach to target B.B.Bs. through same route. Having received the changed messages, target B.B.Bs. stop expressing the previous programming and they start expressing the normal programming. As a result the cancer cells transmutate into normal cells. Or diseased cell gets cured (6) as shown in Fig 4.1

Message system of the Universe

Before the origin of the universe (2) nature had only one type of message systems which is called FIRST TRANSCRIPTION. Messages (Code PcPs) used to go from one B.B.B. to another B.B.B. by atomic transcription. Messages were carried by atomic genes (Code PcPs) with very very high velocity. It is the fundamental message system. After the origin of the universe, nature created atoms. It also created one more message system called SECOND TRANSCRIPTION. Here the message(code PcPs) are carried by photons from one atom to another atom with velocity of light. Thus atoms ,molecules, cells, and even individuals talk with one another . After the formation of the cell , nature created one more system called THIRD TRANSCRIPTION. Here there is a message storage system formed by DNA. There are messenger molecules called mRNA that carry message from DNA script to cytoplasm where the message(code PCPs) is read or translated by ribosome and they work accordingly. Thus the messages reach to enzymes and hormones and finally messages reach to target units. Having received the messages, target units work accordingly. Finally life effects(metabolic) are observed. These three types of message systems are working in the nature. These message system are being used by the nature according to nature's need. as shown in Fig 5

How does nature work & triggering of normal & abnormal effects: To understand creation physics as shown in Fig 6 and Fig 7.. There are two types of thought stimulation (2). One is conditioned thought stimulation and other one is unconditioned thought stimulation.

Stimulation of thought expression: There are two types of thought expressions one is Conditioned stimulation of thought expression, and other one is self stimulation of thoughts i.e. Unconditioned stimulation of thought expression.

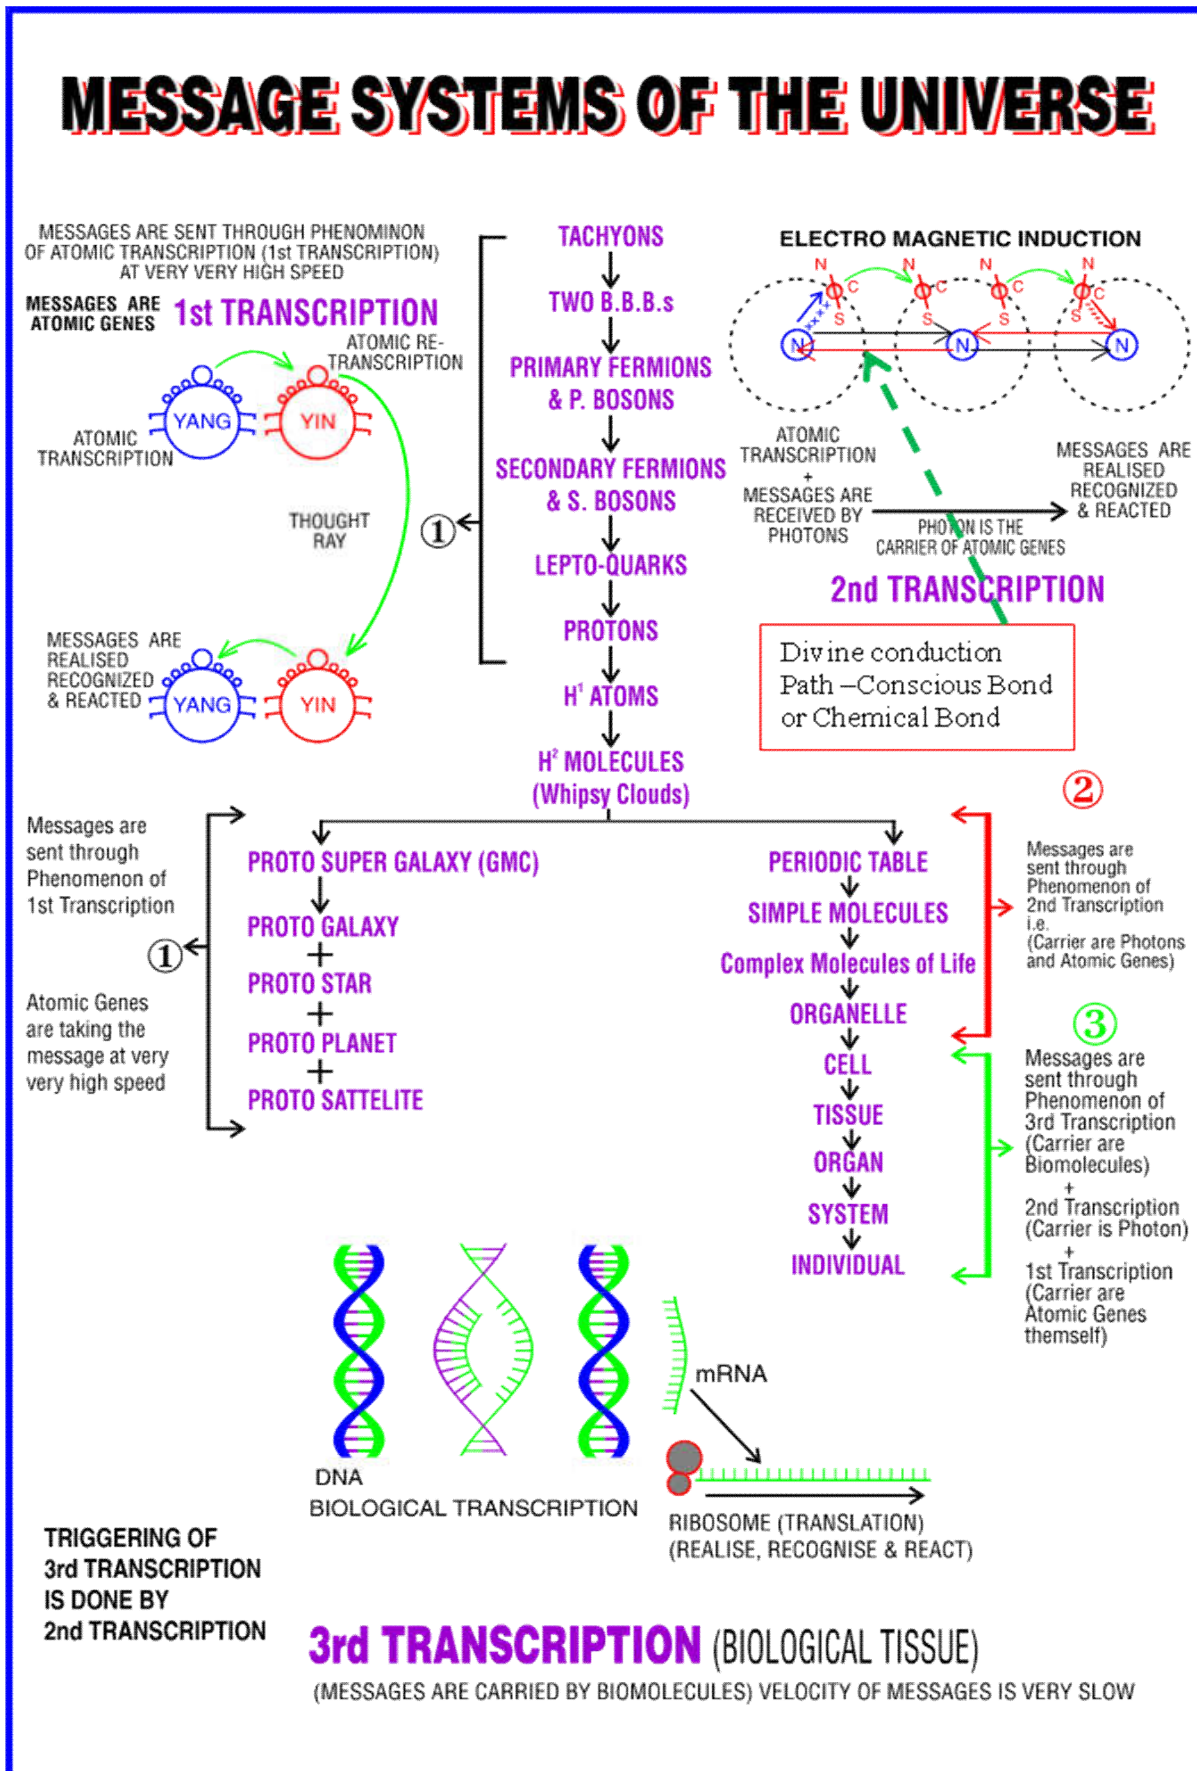

Fig. 5. Messages system of the universe

At the time of the origin of the universe, all effects got created. The cause of all effects of the universe is THOUGHT expression. These thought expressions were triggered by UNCONDITIONED OR SELF STIMULATED WAY. It is the first step and it is followed by PROGRAMMING or formation of programmed messages by code PCPs. This programmed message moves from higher centers to target B.B.Bs. it is called INTERACTION. Having received the messages, the mind and mass of the target

B.B.Bs. work in a synchronized way so as to produced the effects as thought by a the higher center. If the thought expression by higher center is normal, the shapes, properties and laws produced by target B.B.Bs. would be normal and if the thought expressions are abnormal, the shapes, properties and laws would be abnormal. This is the basic concept of transmutation phenomenon. Finally what we observe is called EFFECT. Appearance of new shapes. properties and laws is called TRANSMUTATION. The first three steps are collectively called CCP. During transmutation process if CCP is written, it does mean that unless the thought, programming and interaction take place, nature cannot transmutate. Transmutation phenomenon is seen in particles, atoms, molecules and even in cells. The basic steps of any transmutation remain the same except that the thought expressions differ.

The subatomic particle are made up of more fundamental particles called Basic Building Blocks (B.B.Bs) which are made up of mind and mass. These B.B.Bs are divine in nature with the result they talk with each other by phenomenon called atomic transcription and translation (thought expressions). The triggering of broken symmetry is caused by atomic transcriptions. Unless the atomic transcriptions occur, subatomic particles could never exhibit phenomenon of broken symmetry. So the broken symmetry is never spontaneous. It is being mis understood that sub atomic particles do have spontaneous activities as far as broken symmetry is concerned. Hence the Nobel prize physics 2008 awarded to this work is too early to give prize.

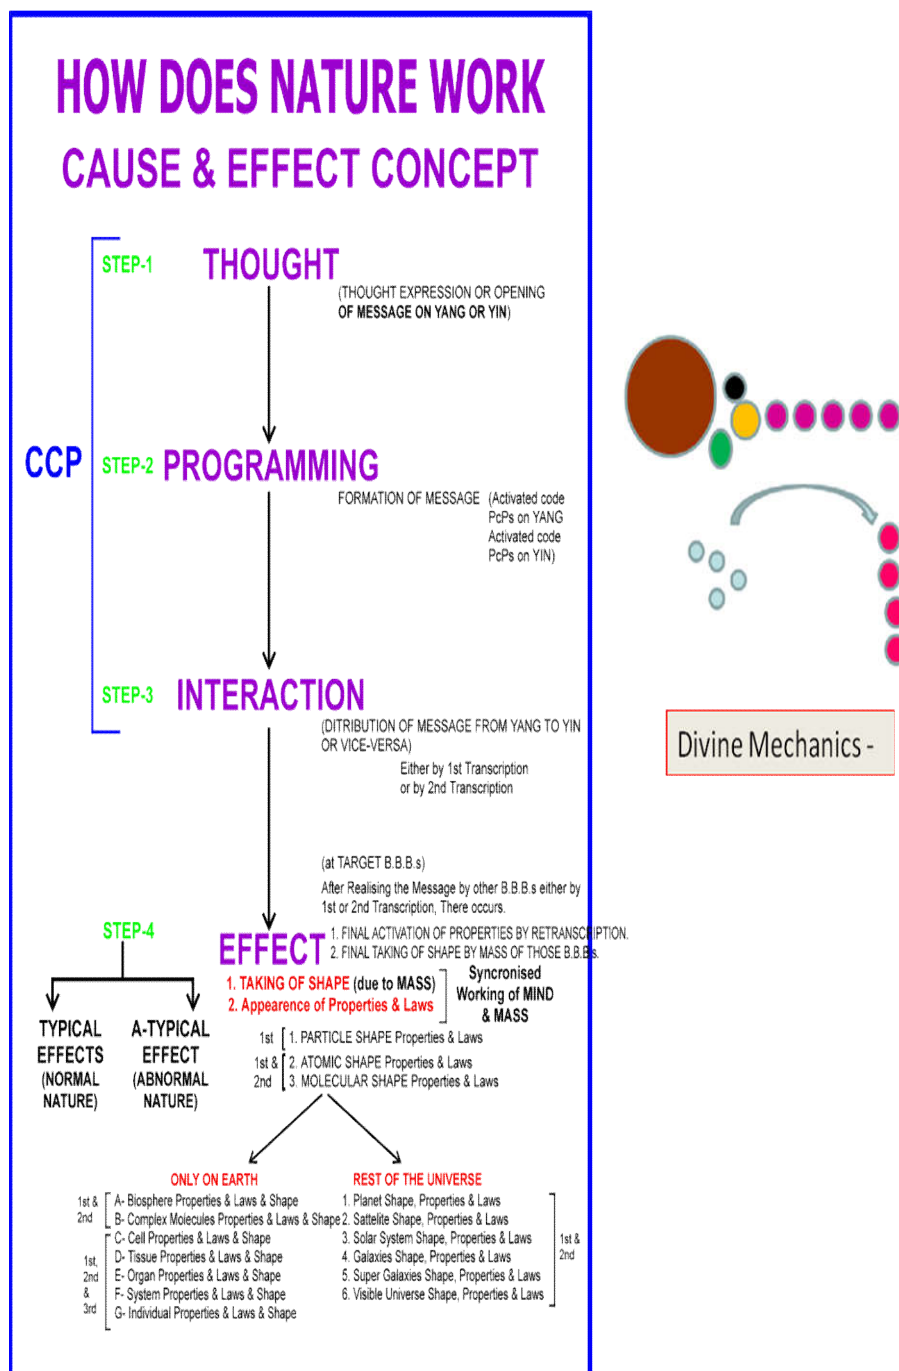

Fig. 6 Divine Mechanics – How Does Nature work ?

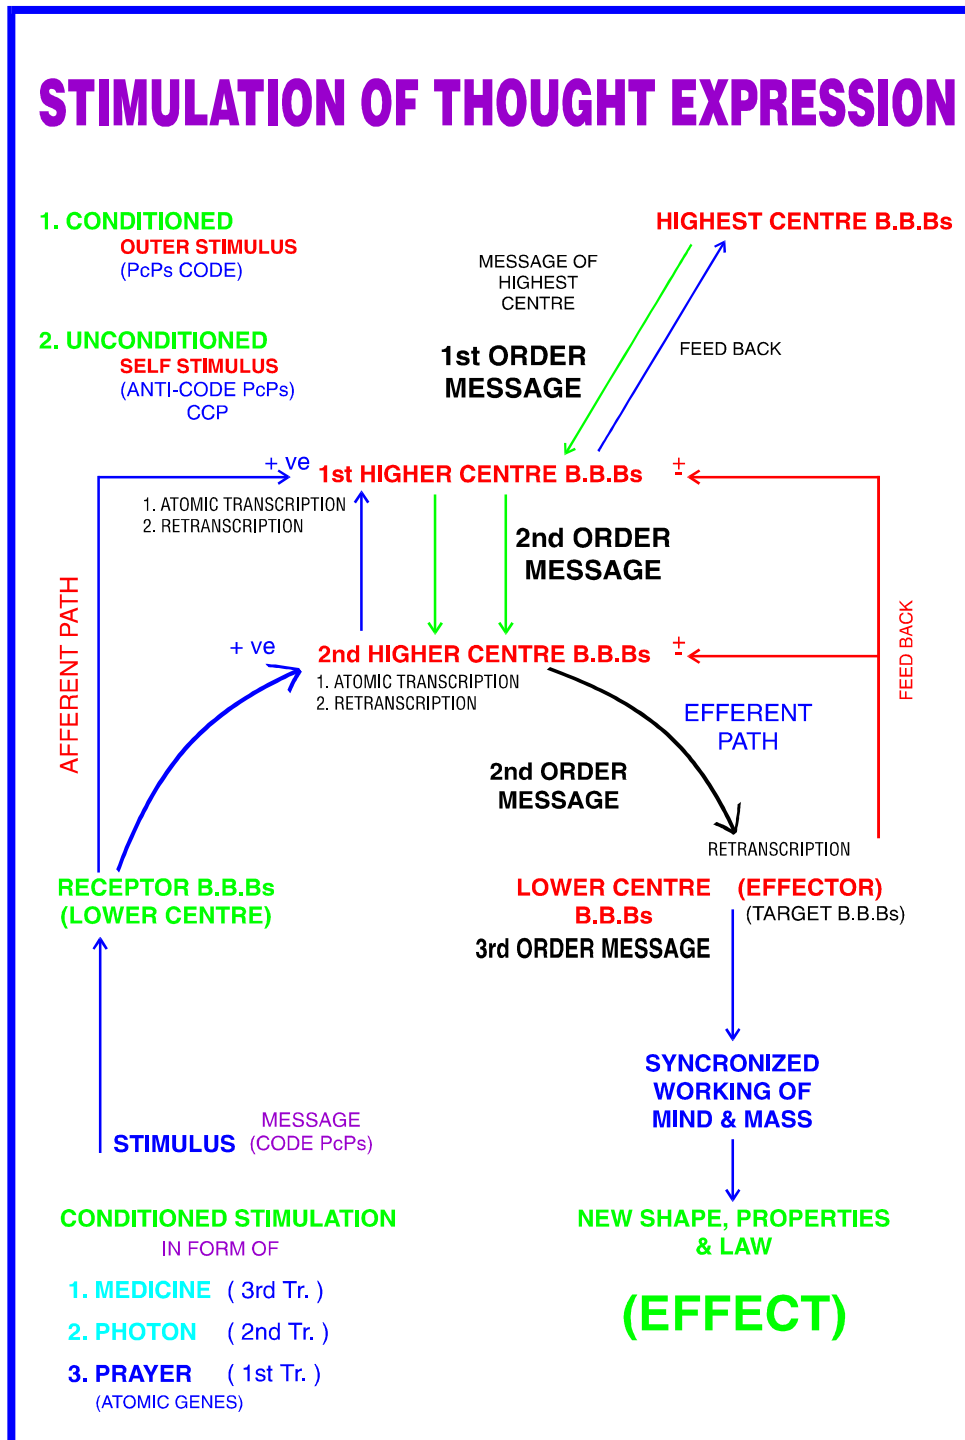

Fig. 7. Conditioned and Unconditioned thought expressions

Message network of the Universe (Feed Back Mechanism and different centers of the Universe)

With the origin of universe, nature first created primary units i.e. primary fermions(gravitation) and primary boson, these primary units are equipped with one higher center(one B.B.B.) and rest of the B.B.Bs. are working as lower centers or target B.B.Bs.(2) After primary units ,nature created secondary units i.e. secondary fermions and secondary bosons. similarly nature created tertiary units(lepto-quarks) and then quaternary units(protons& neutrons). Each unit is equipped with higher centers, lower centers and target B.B.Bs. After quaternary units nature created atomic units, molecular units, complex molecules of life units, organelle units, cell units, tissue units, organ units, system units and individual units. Each unit is equipped with higher centers, lower centers, and target B.B.Bs. Similarly nature created satellite units, planet units, solar system units, galaxy units, super galaxy units, dark matter layer unit. These units are also equipped with higher centers, lower centers and target B.B.Bs. Thus our universe is divided into different units and each unit is equipped with higher and lower centers. All higher centers are under control of highest center of the universe by efferent paths. This efferent path is made up of first ranscription. Higher centers can send messages to highest center of the universe by afferent path or feed back path. Thus highest center of the universe is well informed about all effects of the universe. Messages can come from lower centers to higher centers and from higher centers to highest center of the universe via afferent path.

The highest center of the universe can send messages to higher centers and from higher center to lower centers. There is an inter unit message network also which is made up of first, second and third transcription depending upon the nature's need. Thus the entire universe is under control of highest center of the universe. Highest center can change any programming programmed by it during pre creation era as shown in Fig 8

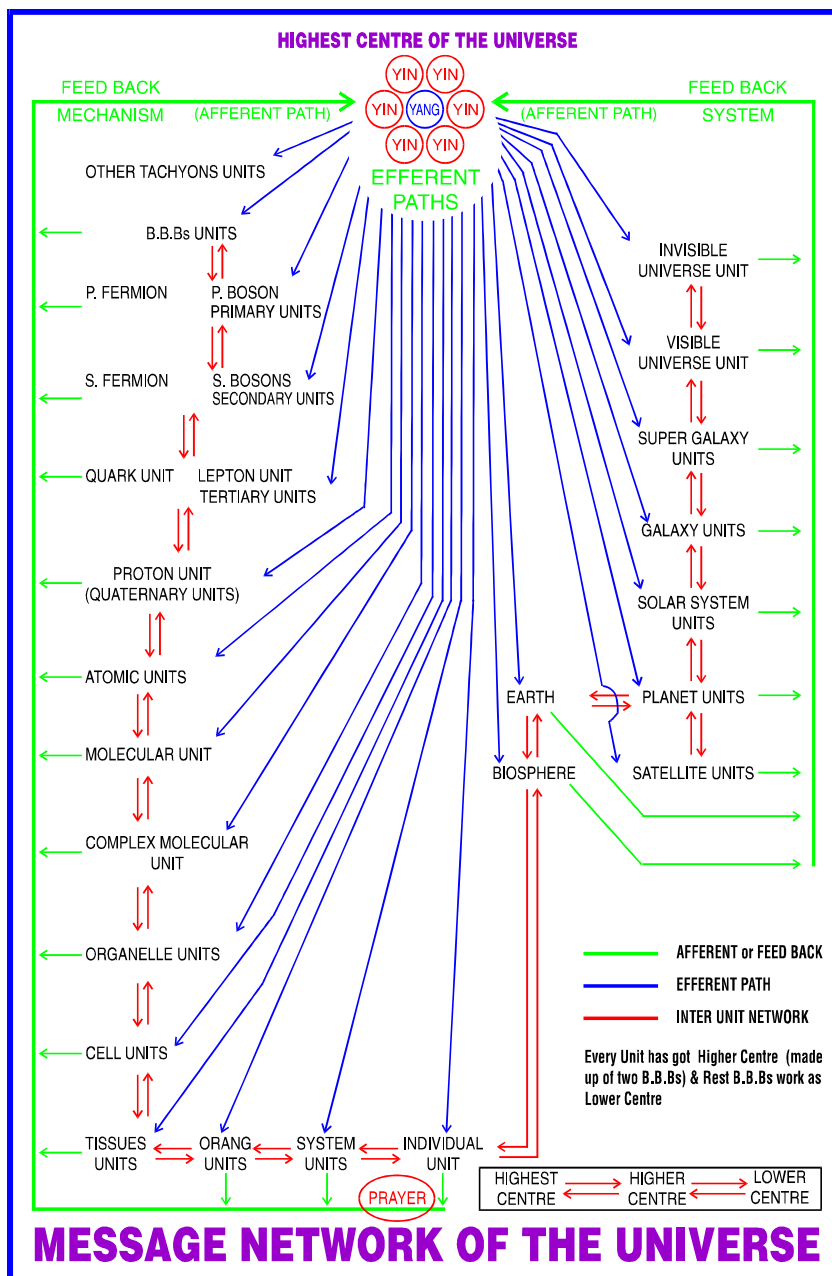

Fig. 8 Messages Net work of the Universe

Origin of the universe (7)

Before the origin of the universe, these Basic Building Blocks(B.B.Bs) as shown in Fig-3 were in the form of tachyons as shown in Fig- 9 (7). It means that at that time the tachyons were everywhere in the universe. Let us look at the structure of tachyons; it is made up of one matter B.B.B.(YANG) and many energy(YINs) B.B.Bs. Initially out of the infinite tachyons, one became the highest center of the universe. Messages used to go from highest center to rest of the universe and messages could come from rest of the universe to highest center of the universe by atomic transcription. Thus highest center had fed its thought to rest of the B.B.Bs. that would take part in creation - that they would express only those thoughts to give desired effect as wished by the highest center of the universe. So all B.B.Bs were informed about their role before creation of the universe. In pre-creation era programming of the future universe was done by highest center of the universe. Our universe is oscillating and it is a divine universe. It means that it has a creation phase and a destruction phase. During creation phase tachyons break into their B.B.Bs. and from these B.B.Bs, formation of fermions and bosons take place as shown in Fig 3.1. After the creation phase, destruction would start and in this phase all created particles would again break into their B.B.Bs and finally tachyons would form. At the time of origin of the universe, all the effects got created. These effects are taking of different shapes and appearance of properties and laws. All these effects are studied in various branches of science.

UNIVERSE "I"

Fig. 9. Development of the Universe

With the origin of the universe, nature first created a sphere of COLD DARK MATTER(C.D.M) and canals in it. With the result space got created. At the other end of the canals, hot reaction started (the relics are back ground radiations 2.7 degree K of our hydrogen clouds). As a result hydrogen clouds and lot of radiations were created. The empty canals were filled by these hydrogen clouds and radiations and thus QUASARS appeared in the universe. Simultaneously C.D.M. layer started expanding and clouds and radiations kept on coming in this closed universe as shown in Fig 9. With the passage of time more and more C.D.M. layer formed, more and more quasars formed. The hydrogen cloud came in this closed universe. They started running towards C.D.M. layer as they were attracted by the gravity of C.D.M. layer. Those clouds, which were nearer, moved faster than those, which were away from CDM Layer. The HUBBLE LAW, can thus be explained. With some more passage of time, clouds were joined to form GMC(giant molecular clouds). Later by self-gravitation different proto stars, proto planets, proto satellites were formed. Finally stars became bright and thus bright galaxies appeared in this universe. Our universe is still in expansion phase and creation is still going inside quasars. It is to be remembered that highest center of the universe does not come in the visible universe. It keeps on receiving the messages by atomic transcription and it has power to change any programming programmed by it during pre-creation era. It is the atomic genes which constitutes mind part of reality. Mind incorporation in physics is awaited as theory of every thing is not yet investigated. I have investigated theory of every thing (ToE) and I found that while studying unified theory at the time of origin of the universe by Hoyle Narlikar universe , it was mind reality that triggered symmetry breaking phase. It is mind reality that triggers oscillation phenomenon of the universe. It is the mind reality which is behind perfect cosmological principle. There is nothing like artificial intelligence in the universe. These mind particles constitute intelligence of the universe that controls the deterministic order of the universe. It is the mind reality behind all effects of the universe. But this is not our mind rather it is mind of Almighty B.B.B(Yang B.B.B or matter B.B.B. or Male B.B.B working as Highest center of the universe) . His mind could be manipulated by prayer only. as shown in figure 9.1 and 9.2

DM and DE i.e. energized gravitons and energy pool of the universe as shown in Fig 10 and Fig 11 (8)

Divine Mechanics and Brain Computation

Learning and Memory and information s (Code PcPs) Net work in Brain (10). At all steps , these are B.B.Bs (B-Bit) that are responsible for information's control and triggering. If CCP is written it means unless atomic transcription and translation occur , brain cannot have learning and memory triggering and control and it is called Divine mechanics of Biology and it is life. These are higher thought expressions of B.B.Bs. In Bits of classical computers and qubits of QC , the thought expressions are lower and different but the mechanics (DIVINE) remains the same. as shown in Fig 12. (Structural and Functional smallest Bit (mass) is B-Bit of the universe and the Divine Mechanical Unit is CCP , Code PcPs and CP.). DIVINE MECHANICS The Theory of Computers and Brain is SAME as shown in Fig 13

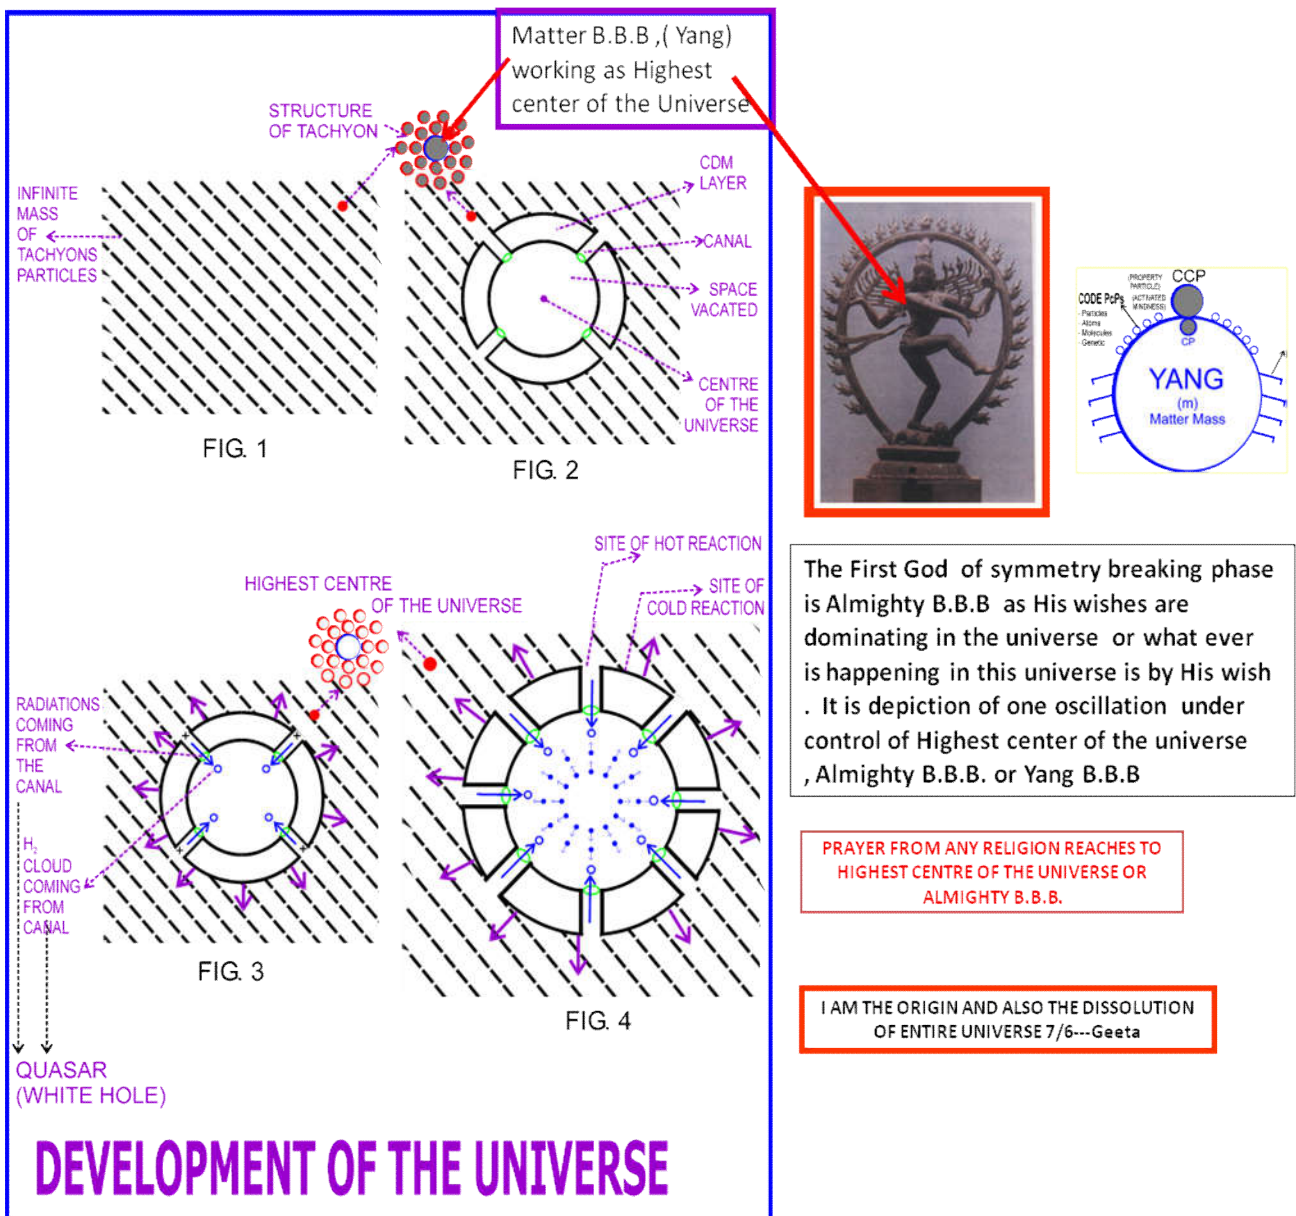

Figure 9.1 Hoyle Narlikar Universe OR Universe “I”

Physics dictates the lowest limits of the size of chips (11). But divine mechanics does not. Hence the bit is a typical unit of information. (Classical and Quantum Bit) is wrong and to describe informations by adding qubit is also illusion as in complicate system, it is the different thoughts expressions that describe informations. Informations are separate (Code PcPs) and bits (Electron of transistor) qubits (electron of diamond crystal) are separate. At DNA level the bit is nucleotide(A,T,C,G) and at Atomic level the bit is photon and electron, at particle level (secondary fermions and secondary bosons) the bit is primary fermions and primary bosons and informations are still code PcPs and at B.B.B level the bit is B.B.B (Yang mass and Yin mass - B- bit) it self and the information is carried by Code PcPs but at all level of all bit units the information storage system is CCP (Physiological arrow of Time) it never dies even after destruction of the universe.

Hence information s are eternal. In computers, Bit is a structural configuration that describes information s of the system and information s are in form of Code PcPs. The working of the bit is triggered and controlled by thoughts of higher centers that form that bit. If the bit is classical (transistors of chips) the effect is different. But if the bit is qubit with entanglement the working is triggered and controlled by thoughts of higher center that form that crystal. In both the effect of describing informations would be different. One is classical (thought expressions are fixed and limited) and other one is quantum (thought expressions are changing and more wide to describe the more wide complicated system to have fast results.). In life sciences in Brain the bit is again Photon and the information s are Code PcPs and they are triggered and controlled by CCP of higher centers that is triggered by DIVINE MECHANICS.

In life sciences the CCP (cryptography) of B-bit expresses information's (Code PcPs) which were not fed like speaking Lie and unlike Bit of classical computer and qubit of QC it shows phenomenon of forgetfulness and IQ phenomenon (mental age /real age). It is Higher functions of B.B.B or B Bit and it is life. Hence there is difference in some aspect of DIVINE MECHANICS \of Computers computation and Brain computation

Structure

Modified theory of atomic structure as Niels Bohr’s theory has limitations in explaining different series of hydrogen spectra. New assumptions of structure of hydrogen atom. – Divine Modified Niels Bohr ‘s Theory (**Divine MONB Theory**) as shown in Fig 14

1. Hydrogen atom is like a miniature solar system with the negatively charged electron moving in circular orbit around positively charged nucleus having positively charged particle proton. In this circular orbit or stationary orbits , electron is being held by single string of energized gravitons . This energy level is called ground state.
2. When Hydrogen atom is excited, the electron moves from ground state to excited state energy levels making a bigger circular orbit and having reached in this new energy levels , it also emits radiations. Hence absorption and emission of energy quanta occur simultaneously. Shifting is understood in inter orbital shift phenomenon.
3. When excitation is over, the electron once again come back to ground state energy level. All above mentioned events are triggered by different thoughts or atomic transcriptions from the nucleus or proton in case of hydrogen atom.
4. These atomic transcriptions are being triggered by conditioned stimulation of CCP by the message system made up of photons(second transcription or –ve charged photons or afferent path) coming from electron to proton and further they are transmitted by photons (second transcription made up of +ve charged photons, or efferent path) to electron. Having received the messages , electron works accordingly. Unless the thought is expressed, nature cannot work. as shown in Fig 14
5. When electron is in ground state, its interaction with energized graviton and electromagnetic photon is more hence IP - 13.59ev (n=1) is required to remove electron from this energy level. During excited stage the interaction is different hence I.P. to remove electron from this state is -3.4ev(n=2), -1.511ev(n=3),- 0.850ev(n=4) , -0.544ev(n=5) respectively. It the changing thought of interaction with energized graviton and electromagnetic photons that gives changing effect.
6. Electronic configuration of higher atoms could be known by studying I.P. curve. Working of hydrogen atom as shown in Fig 14.

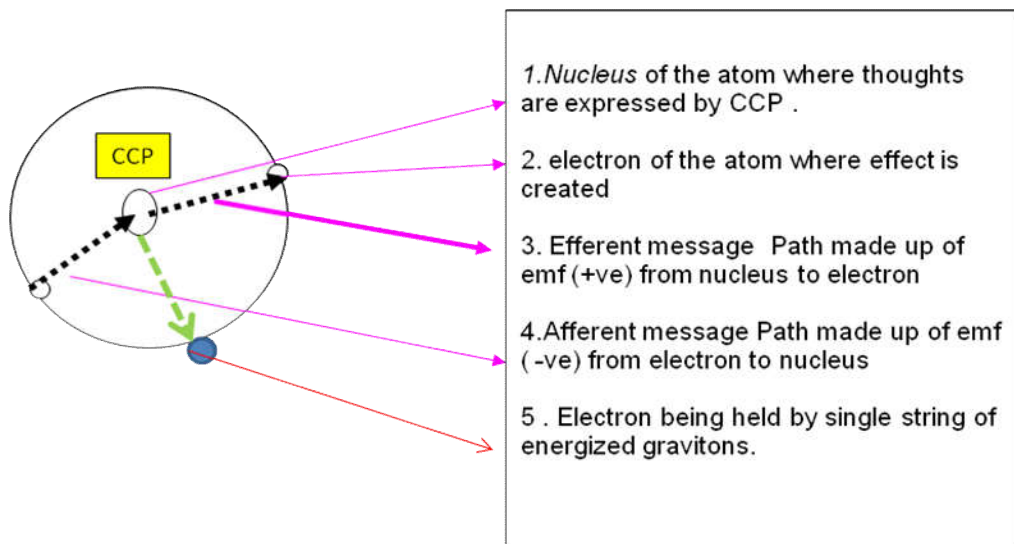

Fig 14 working of hydrogen atom – Divine MONB Theory

Definition of life and death

Life is nothing but higher thought expressions of basic building blocks. When these thought expressions are inhibited and death thoughts are triggered we become dead. Few functions are triggered by conditioned stimulation of thoughts like life and death physiology i.e. if you add water , you would see life effect and if you remove water , you would see death effect.(Fig 19)

Fig 15 Origin of First Life on Earth about 3.5 Billions year back

Evolution of Man It is all MYTH and illusion

Figure 16. Evolution of Man It is all MYTH and illusion . Apes and Man evolved directly from soil by unconditioned thought expression separately . But time period was different

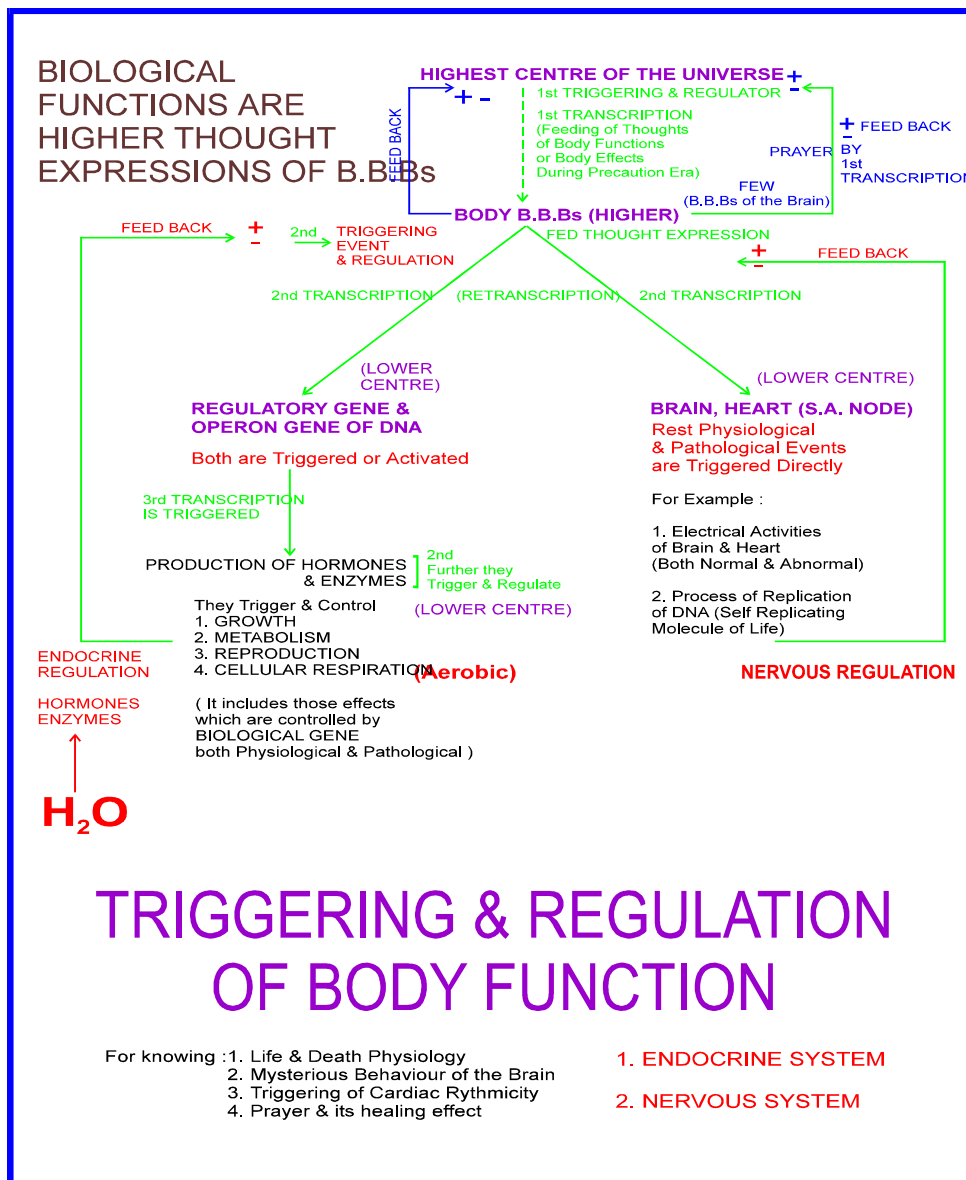

Figure 17. Conditioned stimulation of thoughts or CCP

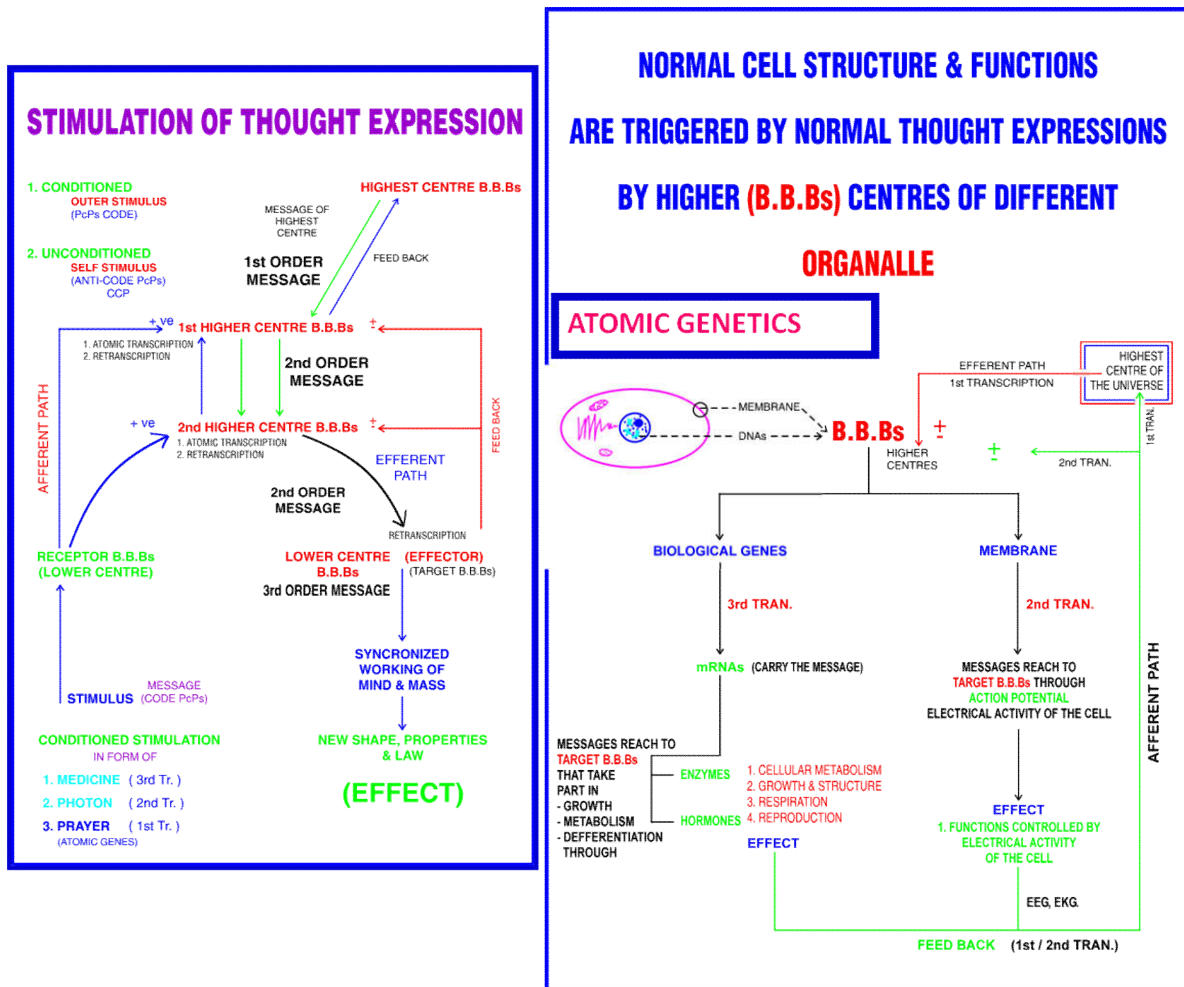

Figure 18. Life activities are triggered by thoughts or CCP

Phenomenon of Germination – Higher thought expression of B.B.B leading to Germination or Plant formation . New Definition of Life

Figure 19. Phenomenon of Germination conditioned stimulation of CCP. Sleep arousal property in plants

Michanics of life and death (Figure 19)

Seed is alive(say having 1% of life activity) but hardly show any sign of life. It has low water content and exhibits virtually no metabolic activity. Such quiescent seeds can live for many years but germinate when soaked in water under suitable temperature and in presence of oxygen. Metabolic activity(anaerobic)are very low in seeds. Metabolic activities come to visually standstill as the seed coat becomes increasable impermeable to oxygen and moisture. The first step in germination is IMBIBITION. Imbibition of water causes resumption of metabolic activities. Initially metabolism may be anaerobic (due to energy provided by the glycol sis) but it soon becomes aerobic as oxygen stats entering the seed.

Fig 21. Formation of protease enzyme (peptide chain) during transcription and translation from DNA

What are life activities?

DNA Activities

- Transcription – that leads to first anaerobic metabolism later aerobic metabolism. It is very very low in seed .
- Replication – it is nil in seed. Replication is the sign of life. If seed does not show replication phenomenon, it means for practical purpose it is dead.

During germination anaerobic metabolism is triggered and later it is shifted to aerobic metabolism. Replication is also triggered. The triggering of both the activities is onset of atomic transcriptions of replication as well as onset of transcriptions of aerobic metabolism. With the result messages come on the surfaces of DNAs and during 3rd transcriptions they are shifted to different mRNAs and finally they reach to different enzymes and hormones. These enzymes and hormones carry messages to target units.

With the result we observe phenomenon of germination. The entire working has been depicted by line diagram(Fig –19). These atomic transcriptions are stimulated by water that is why it is **CONDITIONED STIMULATION** of CCP. The percentage of thought expressions increase with the time and we observe increase in the number of effects. At present we can say that plant is showing from 1 % to 20% or 40% of its effect till it reaches its maturity. At maturity the plant exhibits all effects and at that time we can say it is expressing 100% life atomic transcriptions. With the formation of new seed life atomic transcriptions once again reduced to 1% only. This cycle i.e. going from 1% life effects or atomic transcription to 100% life effects and coming back to 1% again is being visible to us at present. When water is withdrawn, it leads to suppression of life thought expressions and death thought expressions are triggered with the result we observe death effects of plant.

conclusion of the Experiment: The phenomenon of life effect is triggered by atomic transcription of life. Unless life atomic transcriptions are triggered, life effects are not visible. So life effects are nothing but higher thought expressions of basic building blocks. Phenomenon of death is triggered by death atomic transcription. At the time of death life thought expressions are inhibited and death thought expressions are triggered with the result we observe death effects. Water only stimulates life thought expressions that leads to triggering of different life activities (metabolic , replication and other electrical activities) in side the cell. Being a scientist, one must know how do life effects come about. Life effects are higher thought expressions of B.B.Bs. Formation of particles, atoms and molecules are due to lower thought expressions of B.B.Bs. But their higher thought expression lead to appearance of all life effects. One who knows properties of B.B.Bs. and atomic genetics, can understand how life effects are triggered. There is nothing like SOUL. It is a myth that when soul goes inside we get life and when it moves out we are dead. When thought expressions of life are suppressed and thought expressions, of death are triggered, we observe death effects. So life effects are basically triggered by atomic transcription occurring on B.B.Bs. It is DNA molecule which triggers this dead protein or dead A.As into alive A.As in our body. When dead protein enters in our body it gets digested into aminoacids ,the basic unit of protein in the presence of certain enzymes called protease etc. Protease is a peptide molecule formed in cell by process of transcription and translation.

Protein synthesis is the process whereby biological cells generate new proteins; it is balanced by the loss of cellular proteins via degradation or export. Translation, the assembly of amino acids by ribosomes, is an essential part of the biosynthetic pathway, along with generation of messenger RNA(mRNA), aminoacylation of transfer RNA(tRNA), co-translational transport, and post-translational modification. Protein biosynthesis is strictly regulated at multiple steps.⁽¹⁾ They are principally during transcription(phenomena of RNA synthesis from DNA template) and translation(phenomena of amino acid assembly from RNA).

Protease Enzyme

Compared to lipase and amylase, which break down fats and carbohydrates, respectively, the protease family has more extensive roles. Yes, protease helps break down proteins in foods into amino acids, which the body can then use for Cell formation .

Along with breaking of dead protein into amino acids , it also suppresses dead thoughts of dead aminoacids and trigger life thoughts in that aminoacids. With the result dead aminoacids that constitute dead protein transform into live aminoacids in intestine in our body. Thus life is triggered. Protease carry programmed informations (Code PcPs suppression of death thoughts) and (Code PcPs activation of life thoughts). When dead protein comes in contact with protease in intestine , the both informations (Code PcPs) are shifted to target B.B.Bs of dead protein. Having received the messages death thoughts (Code PcPs death) are suppressed and life thoughts (CodePcPs life) are triggered. With the result death effects of AAs are suppressed (decomposition) and life effects in AAs are activated (becomes living molecule). Life is higher thought expressions of B.B.Bs (Fig 17 and Fig 18). Concept of soul is Myth.

Role of DNA in transformation of dead A.As into Alive A.As of body. (micro level): In phenomenon of activation of life effects and suppression of death effects , following steps take place on Yang B.B.B – B-Bit of DNA (Figure 23). It is TM that triggers and regulate the thought expressions by activating CP of that script.

1. 1.CP removes RM (repressor mindness-green) from OM (operating mindness -orange) thus induction of recall is triggered
2. 2.OM searches learning mindness on Anti mind particles (Anti mind particles script) of that thought script(blue filed circles- open eye) of “activation of life effects and suppression of death effects separately”.
3. But as that learning mindness is there with opening eyes of learnt anti mind particles.
4. Inactivated code PcPs “activation of life effects and suppression of death effects separately “ mind particles triggering to lock on Anti mind particles script
5. Formation of activated code PcPs “activation of life effects and suppression of death effects separately ” as stored messages was there in form of memory (open eye)

6. Finally there is activated message of “activation of life effects and suppression of death effects separately ” is formed (Filled magenta circle – open eyes) by CCP (filled circle blue –open eyes). CP makes phenomenon of splicing.
7. CP represses act of recall memory by adding RM (green) to OM (orange). Thus recalling information s of “activation of life effects and suppression of death effects separately ” get halt.
8. Alive A.As are different from dead A.As in terms that dead A.As if not transformed into alive A.As would decompose or they would further break into their component of C,H,O and N. They would be recycled in nature. It is called autolysis of dead cell. While alive A.As would follow order of DNA (second order) and would be consumed in formation of living cell and they would be used in growth , reproduction , cellular respiration and other metabolic functions. These are higher thought expressions of B.B.Bs and it is life.

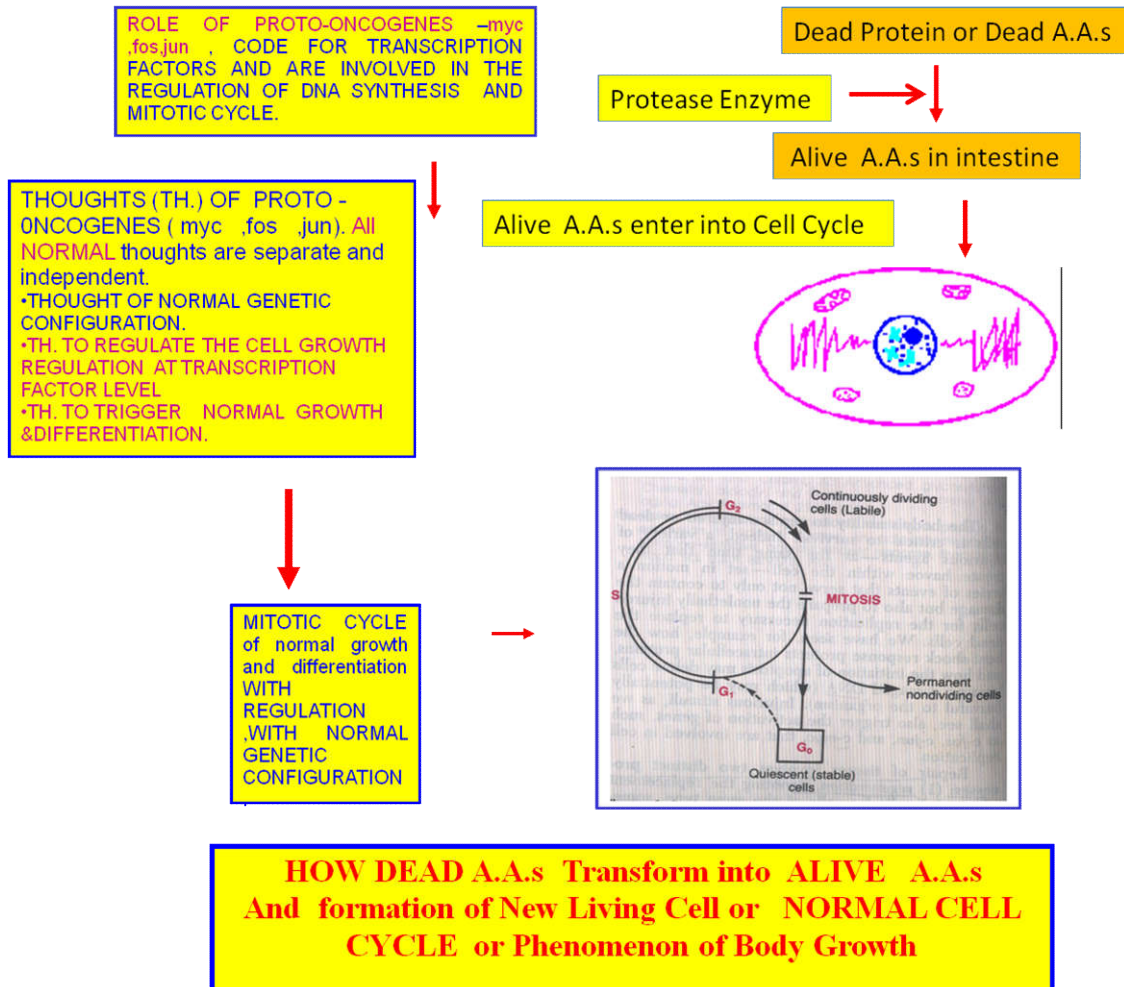

Fig 22 Normal Cell Cycle. It is DNA molecule which triggers this dead protein or dead A.As into alive protein or alive A.As in our body.

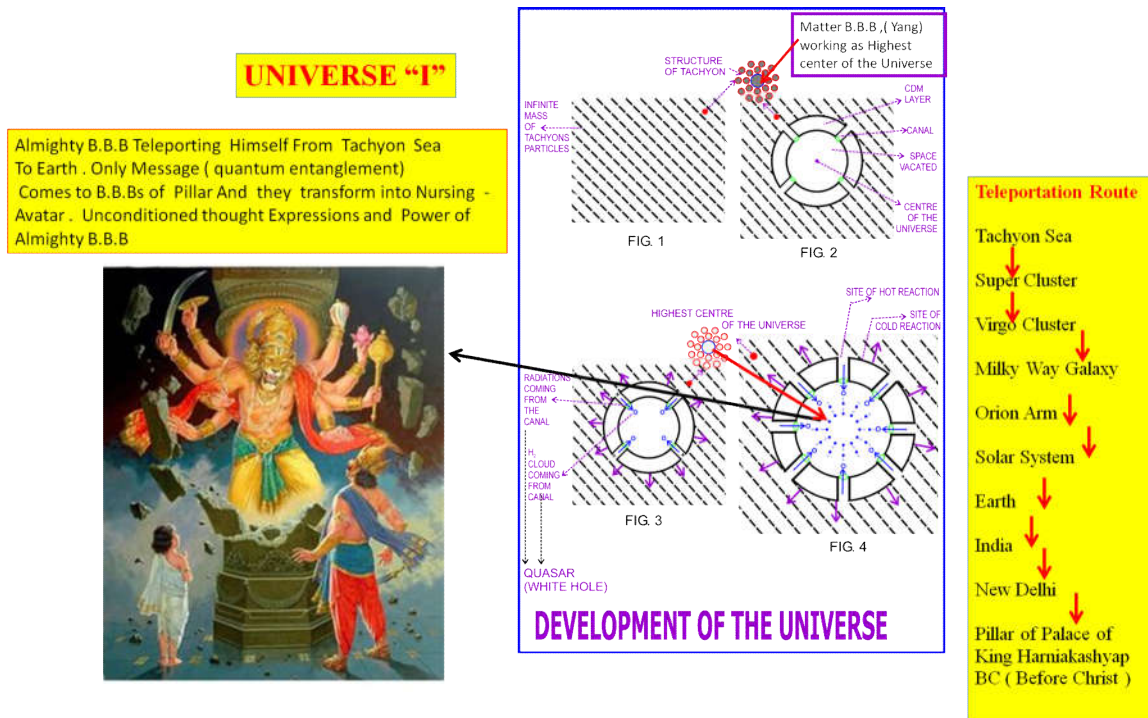

Fig 25. Phenomenon of Teleportation and UPS (universe positioning system) in the mind of Almighty B.B.B (Allahatala) in Universe “I”

Prediction of Theory – How to make dead person alive ?

Theory predicts that Highest center of the universe has power to create all sets of informations (Code PcPs) of which we are made up of from soil by unconditioned thought expression or First order of universe. AGE (prayer or first transcription or quantum entanglement) works on diseased cell but for transforming dead cell , we require Highest center to be teleported from Tachyon sea to Earth as did Lord Narsing Avatar.

Lord Narsing Avatar (Fig 25)

The theory predicts that when Almighty B.B.B teleports Himself , He (Creator of universe and Aliens) could tell exactly where Aliens reside in universe “I”. Dirac equation is illusion as mathematics does not have thought of mind and thought of Creator. Self positioning system (SPS) in brain triggers to know our surrounding and our location. It is being used by animals and birds during migration or navigation on earth. Global positioning system(GPS - computer) helps us to know our location and different place and their route on Earth. GPS does not make us to be lost in big cities if we have loaded origin and destination in our computer. There is one more system called universe positioning system (UPS). Teleportation is the phenomenon made by Almighty B.B.B (Creator of universe and Aliens).

As He descends from invisible universe (Tachyon sea) to Earth. First , message comes (first order of universe) to Earth B.B.Bs via first transcription (quantum entanglement) and B.B.Bs of Earth transform in to any shape (Trinity – Human beings or Almighty B.B.B in flesh form)

Conclusion

It is being believed that dead cells could not be made alive by any experiment. But Nature has set a system where dead material eaten during meals get transformed into living material of life and thus we grow. DNA is a self replicating molecule of life. It triggers thoughts from CCP i.e. activation of life thoughts and suppression of death thoughts from higher center (B.B.B) present in DNA. These thoughts CCP are triggered by unconditioned or conditioned thought expressions from thought script CCP. It is TM (time mindness or biological clock) that triggers and regulates these thought expressions step by step. These thoughts are transcribed as informations Code PcPs activation of life and CodePcPs suppression of death separately. These are carried by mRNA from nucleus to cytoplasm by second transcription (photon carries informations) where they (Code PcPs. activation of life information and Code PcPs suppression of death information) are shifted to peptide chain or protease enzyme during translation phenomenon. Having come in contact with protease enzyme , dead A.As of dead proteins transform into Alive A.As during digestion in intestine. That is how life is triggered from dead protein of animals eaten through meals. These thoughts (DNA script) are fed thoughts and feeding was done in pre creation era in the B.B.Bs of DNA (protease enzyme script) by Highest center of the Universe. There is feedback to higher center (B.B.B) before next thought is triggered . There are many thoughts that trigger the phenomenon. But to understand the concept only two thoughts are depicted in diagram. Life effects are nothing but higher thought expression of B.B.Bs. Formation of atoms and particles are due to lower thought expressions. During the origin of life , it was unconditioned thought expressions that lead to formation of first life i.e. green blue algae on earth.. It was due to fed thoughts and feeding was done in pre creation era by Highest center of the universe. . Highest center has only power to trigger same phenomenon by unconditioned working of nature as It did 3.5 billions years back when first life appeared on earth by formation of blue green algae. If this prediction gets true , the entire hypothesis would be confirmed and dead cells could be made alive.

Acknowledgement

My gratitude to my teachers who taught me physiology specially Prof. B.D .Sharma to show me the way to think science and its propagation. He used to teach by Mc Naught “ Illustrated Physiology” that made me to illustrate the universe from micro (God Particles) to Macro(Hoyle Narlikar Universe). with research of “Mind ”. or “ Atomic genetics ”. Prof. Bhram Dutt awarded me distinction in physiology at M.L.B Medical College Jhansi U.P. India
